I am in the process of some big changes to the section 6/7 letter. I am taking a somewhat different approach that what Bob Pallarino had drafted.

I am changing the cover letter to a letter asking the Navy/DLA to make some broad changes to the SOW and also create some other specific deliverables.

I am also planning to attach detailed tech comments from the agencies and BWS to the cover, and ask the Navy to address these as part of their effort to revise this SOW.

This SOW was not much of a workplan. It did not really describe much of the work that was being planned. In my opinion, all this SOW says is that the Navy will put in four wells, update the model with data from these wells, and produce a report.

I also think we need to be getting work product from the Navy in more bite sized chunks vs. documents that have way too much stuff piled into them.
